**Title : Mao OS X Server Command
Line Install and
Configuration v10.4**

Version : DEMO

1.A new Xserve is booted from the Mac OS X Server v10.4 installation disc. Which password will let you connect to the Xserve remotely?

- A.the sequence of characters, "PASSWORD"
- B.the first eight characters of the Xserve serial number
- C.the first eight characters of the Xserve Ethernet MAC address
- D.the first eight characters of the Mac OS X Server software serial number

Correct:B

2.Which command-line tool can help you identify the configuration file that is written to when you change an option from the graphical interface?

- A.ps
- B.otool
- C.tcpdump
- D.fs_usage
- E.netstat -a

Correct:D

3.Certain tools must be used to configure a Mac OS X Server computer from the command line. Other tools are optional. Which tool below is optional when configuring Mac OS X Server from the command line?

- A.ifconfig
- B.serversetup
- C.networksetup

Correct:A

4.You want to enable secure connections to your AFP service. Which command can you use to do so?

- A.sudo serveradmin settings afp:SSHTunnel = yes
- B.sudo serveradmin command afp:setSSHTunnel:yes
- C.sudo networksetup -CreateBond afp:SSHTunnel
- D.sudo networksetup settings -setappletalk "Built-in Ethernet" = SSH

Correct:A

5.Where are records for share points stored?

- A.in /etc/afpd.conf
- B.in /etc/afptovrtcp.cfg
- C.in the local NetInfo database
- D.in the LDAP database of the Open Directory Master

Correct:C

6.Server Admin typically sends commands to servermgrd using _____.

- A.SSH
- B.SNMP
- C.XML over HTTPS
- D.an Apple-proprietary data stream over HTTP

Correct:C

7.Which statement is true of Server Admin's default SSL configuration?

- A.Each server has a unique, self-signed certificate.
- B.SSL is disabled because no valid certificates are pre-installed.

- C.Each server has a unique certificate signed by Apple's Certificate Authority.
- D.All servers use the identical, pre-installed certificate signed by Apple's Certificate Authority.

Correct:A

8.You are using the command-line installer to install PretendCoTools.pkg. You want to install it on a non-boot volume mounted on a server. Which command will help you determine whether the package supports installation on that volume?

- A.hdiutil verify PretendCoTools.pkg
- B.installer -volinfo -pkg PretendCoTools.pkg
- C.lsbom PretendCoTools.pkg/Contents/Archive.bom
- D.cat PretendCoTools.pkg/Contents/Resources/preflight

Correct:B

9.You want to use the built-in software RAID in Mac OS X Server to create a RAID 1 set across two disks in an Xserve. Which command will accomplish this goal?

- A.megaraid create R1 -drive 0 1 -stripesize 64
- B.diskutil createRAID mirror RAID_Volume HFS+ disk0 disk1
- C.diskutil createRAID stripe RAID_Volume HFS+ disk0 disk1
- D.diskutil createRAID stripe-distributed-parity RAID_Volume HFS+ disk0 disk1

Correct:B

10.You want to update the software on a headless Xserve over an SSH connection to the server, but one of the component installers has a graphical element that displays a splash screen. How can you prevent the installer from launching this graphical element?

- A.Run softwareupdate with the -headless option.
- B.Set the environment variable COMMAND_LINE_INSTALL to 1.
- C.Use SystemStarter to start the HeadlessStartup startup item.
- D.Download the updates with softwareupdate -d, then install them with installer -noGUI.

Correct:B
