

# IT-DUMPS Q&A

Accurate study guides, High passing rate!  
IT-dumps provides update free of charge in one year!

**Exam** : **ACD100**

**Title** : Appian Certified Associate  
Developer

**Version** : DEMO

1. Every business process, whether inside or outside of Appian, requires which of the following?

- A. Human interaction
- B. Defined steps
- C. Reporting
- D. Automation

**Answer: B**

2. A client requested a feature that is exceptionally specific and uncommon.

You begin by gathering research to help determine how such a feature could be implemented, but no documentation is available.

What should you do next?

- A. Create a Support Case.
- B. Check The Appian Academy.
- C. Review the Appian Playbook.
- D. Ask the Appian Community.

**Answer: D**

3. At what stage are you most likely to regularly refine the backlog?

- A. Optimize
- B. Release
- C. Build
- D. Initiate

**Answer: A**

**Explanation:**

The 'Optimize' stage in many development methodologies, including Appian's approach, often involves continuous improvement and iterative development. This is when the team frequently revisits and refines the backlog based on feedback, changing requirements, and lessons learned from previous sprints or iterations. Refining the backlog ensures that the most important and valuable features are prioritized and that the product or application continues to evolve to meet users' needs.

Here's a brief rundown on the other options:

B. Release - While the backlog might be reviewed to ensure all required functionalities are present, the primary focus during the release phase is getting the product or feature out to the end-users.

C. Build - At this stage, the team focuses on creating the solution. While the backlog might undergo some changes, it's not the primary stage for regular refinement.

D. Initiate - This is usually the starting phase where initial requirements are gathered, and the initial backlog is set up. The focus here is more on defining the scope and less on refining an existing backlog.

4. HOTSPOT

Match each sprint ceremony to its appropriate objective. Each objective may be used once, more than once, or not at all.

### Sprint Retrospective

Select a match

The ceremony is designed for the Product Owner and Development Team to meet and review the prioritized Product Backlog.  
The Development Team showcases all of the work that has been completed during the sprint, allowing stakeholders to see the application and adapt the product going forward.  
This ceremony provides the team with a platform to discuss what is going well, what could go better, and some suggestions for changes going forward.  
The Development Team estimates the difficulty of developing a feature by using an abstract, but agreed upon, measurement of effort required to implement it.

### Story Pointing

Select a match

- 5.A feature is being deployed to the test environment.  
In which environment is unit testing performed for the feature?
- A. Upgrade
  - B. Development
  - C. Production
  - D. Staging
- Answer: B**
