Exam : **ACD201**

Title : Appian Certified Senior
Developer

Version : DEMO

1.What are the benefits of using connected systems for authentication in Appian?

- A. Simplifies configuration management
- B. Enhances application security
- C. Reduces development time
- D. Increases system interoperability

Answer: AB

2.Which object would be most suitable for designing a dynamic user interface in an Appian application?

- A. Record Types
- B. Process Models
- C. Expression Rules
- D. Interfaces

Answer: D

3.What should be prioritized when reviewing an application's health status using the Admin Console?

- A. Ensuring accurate process model configurations
- B. Adjusting CPU allocation for integrations
- C. Resolving issues flagged by Health Check
- D. Reviewing user permissions and roles

Answer: C

4.An organization has decided to integrate with a third-party to scan incoming documents and capture the details in a table called [appian].[document]. Each document will form a new case in Appian to be displayed on a Record List. The record needs to show data from both [appian].[document] and [appian].[caseData], which holds additional case information.

What is the most efficient way to achieve this?

- A. Create a trigger on the [appian].[document] table to copy all the data across to the [appian].[caseData] table and point the record at [appian].[caseData].
- B. Create a SSIS package to run at a regular interval.
- C. Create a view between both the [appian].[document] and [appian].[caseData] tables to feed the record.
- D. Create a stored procedure to query the data from both the [appian].[document] and [appian].[caseData] tables.

Answer: C

5.What is the role of plug-ins in Appian applications?

- A. To extend Appian's out-of-the-box functionality
- B. To create new relational databases
- C. To manage cloud-based integrations
- D. To store user data securely

Answer: A
