Title : Fundamentals of Applying
SmartCloud Application
Performance Management
Solutions V1

Version : Demo

1. A customer explains that they frequently experience slow downs that cause end users to call in to the service center and complain about the application. They explain that they have a Web server farm, several clustered application servers, and some back-end databases which support the application. Which question will determine if they are a good match for an IBM SmartCloud Application Performance Management solution?

- A. Which e-mail system is used?
- B. Does the service center use a ticketing system?
- C. Is there a chart or drawing that shows the transactional flow of the application with the vendor types and versions?
- D. What is the most common slow down that end users have experienced, and is it mostly located in the main office or in a remote office?

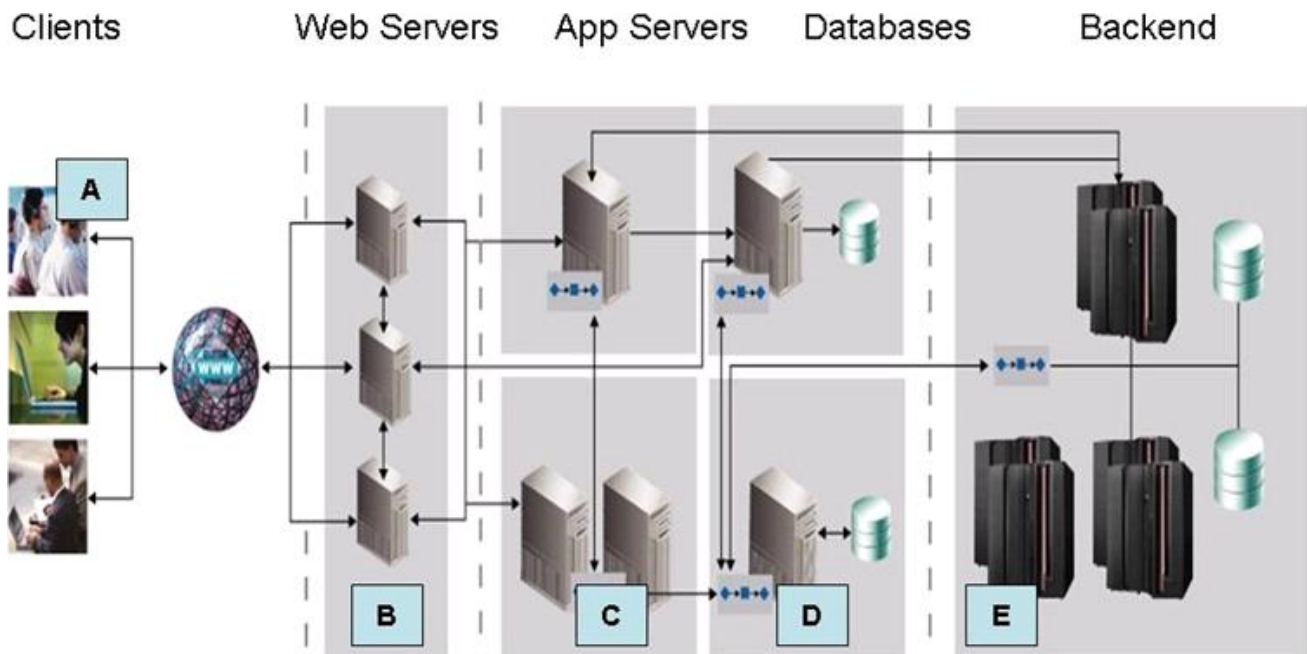

Answer: D

2. Which feature in IBM Tivoli Monitoring meets a customer's need to monitor a server's disk space and receive an alert in the dashboard if the free disk space is lower than 5%?

- A. Policies
- B. Situations
- C. Alert Rules
- D. Evaluation Rules

Answer: A

3. See the Exhibit below.

Where should IBM Tivoli Composite Application Manager for SOA agents/data collectors be installed/configured?

- A. on CICS in E
- B. on the WebSphere Application Server in C
- C. on the WebSphere Application/Process Server in C
- D. on WebSphere Application/Process Server in C and CICS in E

Answer: B

4. One benefit of the IBM SmartCloud Application Performance Management User Interface (UI) is that it greatly improves the usability and time-to-value by providing which capability?

- A. a stand alone UI
- B. read-only templates
- C. predefined dashboards
- D. replacing other monitoring-related UIs

Answer: A
