4.A commercial airline uses its database to develop the following regression model to predict the cost of a flight Y (in dollars) by number of passengers:

$$Y = 1,570 + 40.7x$$

Which of the following statements is correct in relation to the airline?

- A. The cost of a flight will increase by \$40.7 when an additional passenger is added to the flight.
- B. The regression model makes accurate predictions for this commercial airline, therefore it will provide good forecasts for other commercial airlines.
- C. The positive intercept in the model indicates a positive relationship between the cost of a flight and the number of passengers.
- D. If each pair of data points is plotted on a graph with Y on the vertical axis and X on the horizontal axis, there will be a downward sloping line.

Answer: D

5.Which of the following is correct in relation to businesses?
