

Exam : CPIM-ECO

Title : CPIM Execution and Control

of Operations

Version: Demo

- 1. When attempting to understand whether there is a relationship between two variables, which quality control tool should be used?
- A. Pareto diagram
- B. Process flow diagram
- C. Scatter chart
- D. Cause-and-effect diagram

Answer: C

- 2.Mixed-model scheduling results in which of the following benefits:
- A. Improved efficiency
- B. Less headcount required
- C. Lower finished goods inventory
- D. Increased forecast accuracy

Answer: C

- 3. Which of the following project characteristics would suggest using the PERT technique, rather than the critical path method?
- A. Estimates of individual task times are probabilistic.
- B. Project tasks are backward scheduled.
- C. Due dates are needed to identify critical tasks.
- D. Project management can determine the critical path.

Answer: A

- 4. Which of the following benefits is a result of Standardized Work?
- A. Ergonomic repetitive movements
- B. Reduced quality checks
- C. Evolutionary operations
- D. Process stability

Answer: D

- 5. Which of the following statements about high-volume repetitive manufacturing is true?
- A. Machinery and workers must be flexible
- B. Takt time is variable
- C. There is very little stocking of intermediate assemblies
- D. Throughput times are generally long

Answer: C
