**Exam : Desktop Specialist**

**Title : Tableau Desktop Specialist  
Exam**

**Version : DEMO**

1. For Bullet Graphs we need at least \_\_\_\_\_ measures

- A. 3
- B. 1
- C. 2
- D. 4

**Answer: C**

**Explanation:**

A bullet graph is a variation of a bar graph developed to replace dashboard gauges and meters. A bullet graph is useful for comparing the performance of a primary measure to one or more other measures.

Therefore, we need at least 2 measures for creating bullet graphs.

2. True or False: LEFT JOIN returns all rows from the left table, with the matching rows in the right table

- A. True
- B. False

**Answer: A**

**Explanation:**

Explanation This is true, indeed! The LEFT JOIN keyword returns all records from the left table (table1), and the matched records from the right table (table2). The result is NULL from the right side, if there is no match.

Reference: [https://www.w3schools.com/sql/sql\\_join\\_left.asp](https://www.w3schools.com/sql/sql_join_left.asp)

3. Using the cwurData table, create a cross-tab showing the number of Publications per Country broken down by Institution, and filtered by Country to only show United Kingdom (UK).

For the University of Manchester, what percent of the total publications were contributed in 2014?

- A. 28.415%
- B. 23.497%
- C. 25.683%
- D. 22.404%

**Answer: D**

**Explanation:**

Phew! Tricky one for sure. This question tests multiple concepts and will help you revise them. We'll be using filters, as well as quick table calculations (percent of total) for this one.

1) Firstly, let's drag Country and Institution to the Rows shelf, and year (discrete) to the Columns shelf. Then, drag Publications to the Text Icon in the Marks Shelf.

The following is our view:

		year			
		country		institution	
Sheet 1					
country	institution	year			
2012	2013	2014	2015		
Argentina	University of Buenos Aires			268	276
	National University of La ..			546	546
	National University of Cór..			713	717
	National University of Ro..			976	
Australia	University of Melbourne			45	42
	University of Sydney	56	61	50	45
	University of Queensland	67		75	65
	Monash University			96	86
	University of New South ..			100	90
	Australian National Unive..		101	137	130
	University of Western Au..			165	146
	University of Adelaide			244	234
	Macquarie University			416	391
	University of Newcastle			434	408
	University of Wollongong			445	431
	Curtin University			462	425
	University of Tasmania			461	429
	Griffith University			470	436
	Queensland University of ..			457	477
James Cook University			510	505	
Deakin University			556	502	

4. Is it possible to deploy a URL action on a dashboard object to open a Web Page within a dashboard rather than opening the system's web browser?

- A. YES, we can do this with the help of a plugin
- B. NO, this is not currently possible in Tableau
- C. YES, we can do this with the help of a Web-Page object
- D. YES, we can do this with the help of Tableau Public

**Answer: C**

**Explanation:**

Explanation To interactively display information from the web INSIDE a dashboard, you can use a URL action with a web page object.

For example, you might have a dashboard that shows profits by country. In addition to showing the profit data in your dashboard, you also want to display supplemental information about the countries from a web site.

**Tip:** To easily organize and target multiple web page objects in a dashboard, **rename them**.

1. Drag a **Web Page** object onto your dashboard, and enter a URL.

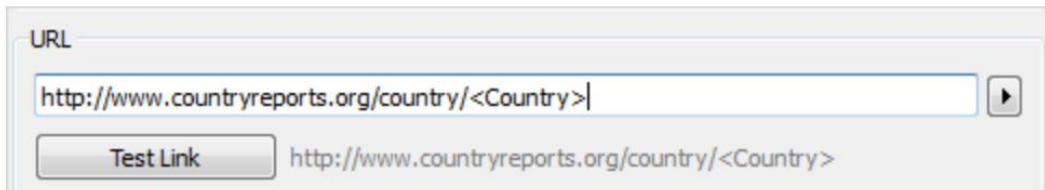

2. From your dashboard, select **Dashboard > Actions**.
3. In the Actions dialog box, click **Add Action** and then select **Go to URL**.
4. Specify a name for the link. If you choose to run the action using a menu, such as a menu option on a tooltip, the name you specify here is what's displayed.

5. Under Source Sheets, select the view or data source that will initiate the action. For example, if you want the action to be initiated when a user clicks a link on a map's tooltip, select the map view.
6. Specify whether people viewing your dashboard will run the action on hover, select, or menu. For details, see [Running Actions](#).
7. Enter the URL, starting with the http:// or https:// prefix, such as `http://www.example.com`.

You can use field values as parameters in your URL. For example, if Country is a field used by a view in your dashboard, you can use `<Country>` as a parameter in your URL. For details, see [URL Actions](#) .

The screenshot shows a configuration window for a URL. At the top, the word "URL" is displayed. Below it is a text input field containing the URL `http://www.countryreports.org/country/<Country>`. To the right of the input field is a small play button icon. Below the input field is a button labeled "Test Link". To the right of the button is a preview of the URL: `http://www.countryreports.org/country/<Country>`.

8. For URL Target, select **Web Page Object**, and select the object you created in step 1.

When you launch the action, a web page automatically loads within the dashboard rather than opening a separate browser window.

5. True or False:

The Highlighting action can be disabled for the entire workbook.

A. True

B. False

**Answer: A**

**Explanation:**

Yes, it is possible to disable highlighting for the entire workbook.

Legends	<ul style="list-style-type: none"><li>• Supports one-way and two-way highlighting.</li><li>• Highlight on colour, size or shape.</li><li>• You can disable or enable the highlighting action for the workbook or sheets from the toolbar.</li><li>• Your selection is saved with the workbook and can be included in dashboards and stories and when publishing.</li></ul>	<ul style="list-style-type: none"><li>• When you want to focus on select members in a view and dim all others.</li><li>• When you want to highlight using only the legend or the legend and the view.</li><li>• Works well with small domains or views with a small amount of data.</li></ul>
