

# IT-DUMPS Q&A

Accurate study guides, High passing rate!  
IT-dumps provides update free of charge in one year!

**Exam : HP0-J16**

**Title : Introduction to HP SANs**

**Version : Demo**

1. What are the processing requirements of Information Lifecycle Management? (Select two.)

- A. fast
- B. secure
- C. auditable
- D. transparent
- E. easy to use

**Answer:** CD

2. In the context of storage infrastructure management, what is the definition of the term target?

- A. a goal set for errors on a device
- B. an entity that needs management
- C. a disk or tape connected to a SCSI bus
- D. a vendor-specific management tool that connects to a device

**Answer:** B

3. To which category of target-based management tools does HP Systems Insight Manager belong?

- A. system management
- B. network management
- C. storage systems management
- D. operating system management

**Answer:** A

4. Which features are provided by Information Lifecycle Management? (Select two.)

- A. measures to protect data from corruption through its life cycle
- B. technologies and processes to dispose of outdated storage equipment
- C. technologies and processes to organize data based on size and sensitivity
- D. processes that enforce data-retention policies and make decisions about appropriate data storage environments
- E. technologies and processes that determine how to store, manage, and communicate information according to its business value

**Answer: DE**

5. Which target-based management software is expected to be provided with the storage component?

- A. OS management suites
- B. system management suites
- C. network management suites
- D. device-specific management tools

**Answer: D**

6. Which industry standard organization approved the Storage Management Initiative Specification (SMI-S)?

- A. ITU
- B. ANSI
- C. IETF
- D. IEEE

**Answer: B**

7. Which tasks are associated with controlling a target in a storage infrastructure management environment?

- A. discover, track, diagnose, and predict
- B. diagnose, predict, repair, and migrate
- C. configure, provision, repair, and migrate
- D. report, bill, analyze, diagnose, and predict

**Answer: C**

8. Because Information Lifecycle Management (ILM) interfaces with activities and people, there is a potential overlap between ILM and other areas. Which area is likely to overlap with ILM?

- A. IT Budget Planning
- B. IT Project Management
- C. Business Financial Planning

D. Business Process Management

**Answer: D**

9. What are benefits of model-based automation? (Select two.)

A. more control

B. cost effectiveness

C. better organization

D. support for complex operations

E. reduced likelihood of human error

**Answer: BE**

10. What is a common method for handling multiple reporting and monitoring functions?

A. Use graphical reports to enhance interpretation.

B. Combine all information into one report for simplicity.

C. Separate low-level information reporting from higher-level analysis and decision making.

D. Use intelligent interfaces to offload reporting and decision-making from management software.

**Answer: C**
